

Why choose Breast Diagnostic Specialists?

 Our highly trained and caring staff all share a dedicated commitment to the early detection of breast cancer and a proactive approach to breast health.

 We offer comprehensive services including breast screening and diagnostics in a welcoming environment specifically tailored for you. We also perform imaging for breasts with implants.

 We proudly provide 3D Mammography (Breast Tomosynthesis) for screening and diagnostic mammograms on the Selenia® 3D System by Hologic and the availability of the MammoPad® to reduce discomfort.

 All Mammogram imaging at Breast Diagnostic Specialists is read twice, independently by two of our fully accredited (RANZCR) Specialists.

 You have the freedom to consult with one of our Specialists on the day.

 A referral letter from your GP or Specialist is required.

Trusted Breast Care

Trusted breast care in a welcoming environment tailored for you.

3D Mammography

For both screening and diagnostic mammograms we utilize 3D Mammography. During your mammogram the Tomosynthesis machine sweeps in a small arc above your breast and produces images in layers as thin as one millimetre. Our Mammographers (who are specially trained Radiographers) will explain and guide you through the procedure.

Breast Ultrasound

We also offer Breast Ultrasound ensuring a complete and comprehensive breast imaging examination. Ultrasound uses sound waves to produce pictures of the internal structures of the breast and helps diagnose breast lumps or other abnormalities found during a physical exam, mammogram or breast MRI.

Breast MRI

Because of MRI's sensitivity to changes in soft tissue, Breast MRI offers numerous advantages as an additional tool for diagnosing breast cancer. It is of particular value for examining abnormalities that first have been detected by mammography or ultrasound and for visualising breast implants.

Breast Biopsy

At Breast Diagnostic Specialists we also have the ability to perform interventional procedures when required, including ultrasound guided breast biopsies and stereotactic core biopsies. Our healthcare professionals or your GP can provide further information.

Introducing a "softer mammogram".

We are pleased to provide mammograms using the MammoPad[®] breast cushion for a "softer mammogram". The cushion is a foam pad which is invisible to X-rays that makes your mammography exam more comfortable, without compromising the quality of the images. The reduction of discomfort found with MammoPad breast cushions helps you relax during the imaging, and assists with positioning and sufficient compression which are important components of your mammogram.

MammoPad[®] Benefits

- Soft foam for cushioning support
- Padded surface reduces discomfort
- Assists with relaxation during the exam
- Helps hold breast tissue in place
- Aids optimal breast positioning
- Provides a warmer, softer mammogram
